### FACTSHEET ONLINE

## TRAINING CONTENT

This training is for leaders in organisations who want to explore New Work methods. You will learn what Kanban is and why it is such a powerful method to speed up processes in organisations without overburdening your team or your company.

It is important to start at the level of the individual, but to use the method primarily for visualising cross-departmental activities so that the method can unfold its full effect. You will also experience how to increase efficiency by limiting the Work In Progress (W.I.P.), how the "pull system" works and who sets the priorities within the Kanban method.

## THE FLIGHT LEVEL MODEL

The Flight Level Model by Klaus Leopold describes the possible applications of Kanban in a company.
